

The 2011 edition of the workshop on Statistical Methods for Post Genomic Data (SMPGD) will be held in the Curie Institute (Paris) on January 27-28. This workshop gathers statisticians who are interested in methodological developments devoted to the analysis of high throughput biological data. Speakers are mainly statisticians that present their work and the tools developed for the community. This year three sessions are focused on Recent Advances in multiple testing, high throughput sequencing and statistical genetics.
